

**BOX  
ALERT**

# The solution for all vehicles

Upon ignition of the vehicle, the device in the cabin gives warning on the red light and sound if the dump box is raised. The buzzer automatically turns off after 5 seconds and remains off until the vehicle reaches 12 km/h (8 mph). Above 12km/h; the audible alarm sounds again. The device triggers the visual and audible alarm if the position sensor on the tipper body is disconnected or defective. If there is signal loss on the speed sensor only the audible alarm sounds. The device and the speed are configurable.

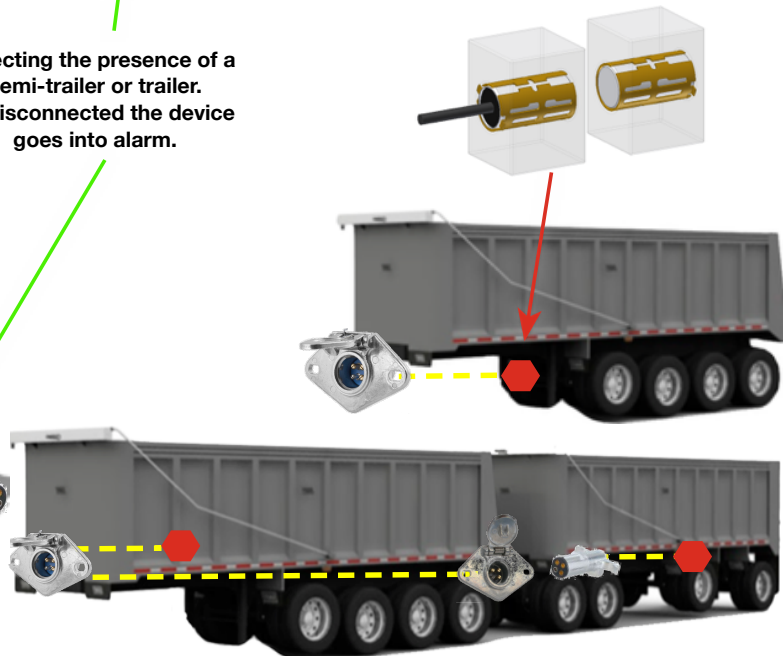

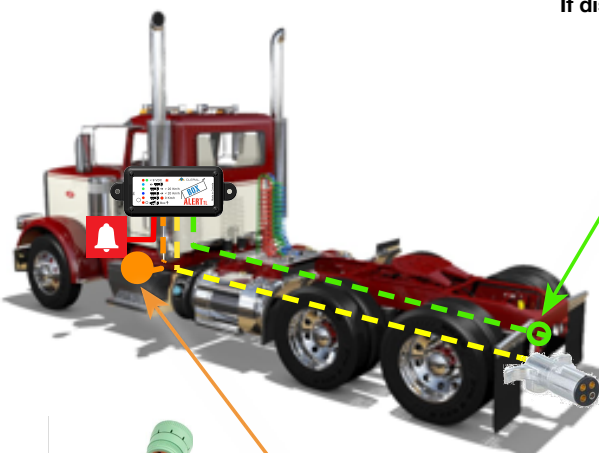

**Installation in less than 1h30.**

**Independent two-in-one integrated warning light and audible alarm for easy mounting on a dashboard.**  
The high intensity red light is visible at 180 degrees (60 times a minute). The audible alarm is adjustable up to 103 dB (frequency of 120 times minute).

Detecting the presence of a semi-trailer or trailer. If disconnected the device goes into alarm.

Ultra-resistant sensor installed under the dump box. Remains functional after shocks of 100G's. 50 times more resistant than a proximity sensor.

Speed capture on j1939 or OBD2 protocol, more secure than a GPS measurement.

Robust wired connectivity already used by industry. (possibility of having wireless communication)
